Peacefully quiet.
Remarkably fast.
Canon Medical Systems’ Vantage Galan 3T offers a transformational experience for you and your patients in MR.

By prioritizing the patient experience, image quality and clinical workflow, Vantage Galan 3T is designed to surpass your expectations – all delivered in the smallest and quietest MR in its class.

Excellent image quality
Streamlined workflow
Outstanding patient comfort
Excellent image quality for every clinical application

The intelligent Saturn technology provides a more consistent image quality through increased gradient stability and precise center frequency control.

Increased gradient stability

With less vibration comes more stability, resulting in sharper images. Saturn technology delivers this through hardening the gradient coil with high-pressure molding. The result is less signal blur and thus better image resolution.

Precise center frequency control

In the Vantage Galan 3T, increased image sharpness is achieved through improved thermal stability and thus a more stable center frequency. Triple cooling layers suppress temperature increases under high load leading to more stable image quality over long scan sessions.
Innovative technology for sharper images

Our unique PURERF technology increases the signal-to-noise ratio (SNR) of Vantage Galan 3T by up to 20 percent for all clinical applications. The system’s improved RF transmit and receive efficiency helps raise your diagnostic confidence while shortening scan times.

Advanced shielding design

Vantage Galan 3T’s unique PURERF Tx technology allows you to acquire sharper images with improved SNR. Its novel shielding design is aimed at maximizing the efficiency of RF transmission.

Adaptive noise cancellation

PURERF Rx technology employs a proprietary algorithm and reduces noise at the source. The result is an increase in SNR and improved image quality.
A richer set of images

Our industry-leading non-contrast techniques allow for vascular imaging from head to toe, expanding patient access to MR angiography and dramatically improving patient safety. Multi-phase transmission technology provides outstanding homogeneity across all anatomical regions and clinical targets.

Seeing the unseen with UTE sequences

Extend the range of imaging to tissues traditionally difficult to capture in MRI. Ultrashort Echo Time (UTE) allows for imaging of tissues such as ligaments, tendons and lung tissue.

Multi-echo imaging in one breath hold

Six echoes can be acquired within one breath hold allowing for quantitative information while maintaining SNR and spatial resolution.

Capturing hemodynamics with mUTE™ 4D MRA, 3 phase

Vortis Gx: UTE sequences allow for less dephasing and more homogeneous vessel signal. At the same time, the multiple TI (4D) generates dynamic images visualizing the blood flow without the need for contrast agents.

Contrast in your images, not in your patients

The risks associated with gadolinium-based contrast agents has driven the need for alternative techniques. Our unique non-contrast MRA sequences minimize risk while producing exceptional images.

### Non-contrast MRCA

Non-contrast MRCA

Non-contrast MRCA MIP post-processing
The ultimate, intuitive MR interface

The intuitive M-Power user interface takes MR performance and flexibility to an unprecedented level. M-Power can be customized to your site-specific requirements to increase efficiency all the way from patient registration to reporting and archiving the clinical results.

Streamlined workflow in an efficient workspace

M-Power makes sophisticated suite of MR software remarkably easy to learn and use, enabling technologists of every skill level to access its full range of functionality. M-Power allows you to accommodate a higher patient volume while offering a wider range of clinical applications.

Advanced post-processing as easy as 1-2-3

Advanced post-processing functions such as fMRI, spectroscopy, diffusion or tensor tractography can be accessed directly on the main console using a simple, three-step process. These optional applications can be added as your clinical practice grows.
Integrated workflow solution
Atlas SPEEDER coils are uniquely designed to improve workflow and patient comfort. Vantage Galan 3T easily handles multiple studies by allowing you to position the patient and utilize the coil you need in one easy step.

Positioning flexibility
• Multiple coils can be used simultaneously, creating flexibility for operators and comfort for patients.
• Convenient port locations mean that a large segment of exams can be performed feet first.
• 205 cm of table movement coupled with a sliding spine coil provides maximum flexibility for operators and greater comfort for patients.

Atlas SPEEDER technology empowers the technologist

Compared to conventional coils, Atlas SPEEDER coil technology utilizes a unique combination of smaller elements, which deliver a higher SNR, and larger elements which provide greater penetration. By simultaneously integrating up to 128 RF channels, Vantage Galan 3T provides better image quality throughout the entire imaging volume.
NeuroLine+
Achieve outstanding scan consistency for all your brain exams with NeuroLine+. The function’s intelligent alignment algorithm allows you to automatically set up according to AC-PC or OM line.

SpineLine
With its auto-locator functionality, SpineLine allows you to plan spine studies quickly and easily. Sagittal and coronal locators allow you to set double-oblique slices, enhancing the reproducibility of follow-up exams.

Automated, reliable and robust
With the complexity of scan planning, achieving scan plane reproducibility can be quite challenging and time-consuming. EasyTech technology helps you improve workflow with automatic slice alignment for neuro, spine and cardiac exams, standardizing your workflow with automatic positioning.

Fast, high-quality cardiac exams
SUREVOI Cardiac and CardioLine+ allow you to significantly reduce the scan time and increase throughput. Challenging cardiac examinations can now be performed as part of your daily routine.

SUREVOI Cardiac
Automatic detection of heart and liver with a non-rigid model allows for full workflow automation from table positioning to the Real-time Motion Correction (RMC), probe placement and fully automated cardiac planning.

CardioLine+
CardioLine+ automatically identifies the 14 standard cardiac planes including right and left ventricles, as well as the four cardiac valves in a single breath-hold scan.

Workflow-driven applications making your work easier

Canon Medical Systems provides an advanced image processing environment that is designed to work in the most effective way with Vantage Galan 3T. Olea advanced image processing technologies are available through the Vitrea™ workstation.

Vitrea multi-modality workstation
The Vitrea workstation is the foundation of Canon Medical Systems’ advanced visualization. It includes 2D, 3D and 4D viewing with stitching and subtraction, 3D analysis for vascular and organ post-processing along with basic export and reporting tools.

MR advanced applications
The advanced applications provide access to enhanced clinical routine tools including Diffusion, Perfusion, Curve Kinetics with streamlined application workflows for a variety of target organs.

MR Expert packages
The MR Expert packages provide access to the latest and most advanced tools and applications to expert users for a wide variety of neuro, body, cardiac and orthopedic examinations.
Resource-saving equipment for a compact space

Every inch on Vantage Galan 3T’s design has been considered to maximize efficiency while minimizing energy consumption. The system’s zero boil-off magnet fits into a small space, while providing a comfortable, open environment for your patients at the same time.

Small size, big performance
The system’s short and compact bore lowers patient anxiety and at the same time allows a 3T scanner to be installed in a room originally designed to hold a 1.5T system. The eco-friendly cabinet design simplifies and shortens installation time.

18.6 m² SCAN ROOM SPACE
27 m² TOTAL INSTALLATION SPACE
9 DAYS INSTALLATION TIME

2 The 5 Gauss line is not confined within the Scan Room. Controlled access area should be taken into account to the facility within parameters for installation. The above specifications may not meet the local requirements, please consult with your architect and/or electric consultant for coding requirements.

Saving power on the go
Vantage Galan 3T’s power-saving eco mode is automatically triggered when you lower the patient couch to help you minimize your running costs. At only 70 kVA Vantage Galan 3T has the lowest rated power requirement in its class.

An MR designed for patient comfort

A successful exam begins with a comfortable patient. Vantage Galan 3T is designed to maximize patient comfort without compromising image quality. Its 71 cm wide bore patient aperture allows you to image even large patients comfortably and efficiently. The slim gradient design provides significantly more space between the patient and the inside of the bore, greatly reducing acoustic noise with the system’s patented Pianissimo technology.

Reducing noise at the source

MR noise is one of the major complaints of patients and medical staff. Our patented Pianissimo acoustic shielding technology significantly reduces the noise in and around the MRI environment for every sequence, every scan and every patient. Pianissimo Zen sequences further reduce noise to just above ambient noise level, making exams even more comfortable and easier to complete.

Give your patients a greater sense of freedom

To minimize patient anxiety caused by the confined examination space inside the gantry bore, Vantage Galan 3T offers an immersive in-bore MR Theater option. As the images displayed appear to be much further away than the actual bore, the MR Theater provides an expansive virtual space for the patient which can help minimize claustrophobia.
Peacefully quiet.
Remarkably fast.
